

A new high-performance titanium twin exhaust system to maximize the efficiency of air flow through the powertrain

Deep body stamping from the Q60's manufacturing process allows the Project Black S concept to retain the sports coupe's deep creases and flowing lines

S

The Project Black S is finished in matt grey and black – while a smoked chrome trim replaces the finish found on the standard Q60

A production car with Formula One-inspired performance hybrid technology would benefit from instant, lag-free acceleration

PROJECT BLACK S

Large fixed rear wing – also made of carbon fiber – maximizes downforce at speed

INFINITI and the Renault Sport Formula One Team have collaborated on the development of a performance hybrid powertrain

Project Black S features 21-inch wheels and wider, high-performance tyres

Flared wheel arches improve aerodynamic efficiency and result in a daring – even aggressive – design execution

RENAULT SPORT
FORMULA ONE TEAM

TECHNICAL PARTNER

Carbon fibre parts minimize weight and maximize aerodynamic efficiency

Bespoke air intakes help to cool the engine and brakes while also assisting in aerodynamic efficiency
