

Innovation
that excites

Resende plant's 150 thousand cars

Nissan's Industrial Complex manufactures three models: March, Versa and Kicks. If all cars made in Resende were lined, their combined length would total 611 km. If placed one above the other, the total height would be 231 km. Do you know what it means?

It is approximately

15x

the distance
"From Leme to Pontal"*
(40 km).

It would be

4x

higher than the ozone in the
stratospheric layer (50 km).

It's about

76x

the circumference of Maracanã
Stadium in Rio de Janeiro.

It is approximately

33x

the height of the Aconcagua,
the highest mountain in the
Americas, located in Argentina.

Almost

4x

the distance between NBA HQ
and Resende Industrial
Complex

* Leme and Pontal are iconic places in Rio de Janeiro state, where Resende plant is located, and there is a famous song by Brazilian artist Tim Maia, called "From Leme to Pontal".
